

POOL ARTISANS FOR OVER 50 YEARS

POOL CLOSING DETAILS

BASIC WINTERIZING PACKAGE

To include

- Blow out lines and filter
- Remove Drain plugs
- Shut off gas lines
- Install owners plugs in all of the lines
- Disconnect and store pump and motor (if possible)
- Add antifreeze to all lines except main drain (cost of antifreeze is additional)

COMPLETE WINTERIZING PACKAGE

To include the installation of winter cover

Winterizing notes and Conditions for optimal results:

- Water chemistry should be balanced with the chlorine level at 3.0 & pH at 7.6, before we arrive
- Water level in pool should be below the lowest return line, by 1 inch. If you have an auto-cover, leave the cover completely retracted into the cover box to prevent damage
- Spa's must be drained prior to closing
- Pool should be vacuumed before we arrive
- Negative Edge's must be drained prior to closing

REMINDERS

- After the closing, raise and keep your water level within 18" of your pool coping if you have a safety cover
- If the pool is not chemically balanced and/or water level is not lowered to correct level, we will do it at the time of the closing for the appropriate charges
- Keep water level below tile line for concrete pool throughout the off season
- **Pool must be prepped and ready the day prior to scheduled pool closing**
- Pump off your solid cover throughout the off season
